Technology for Business

Connecting People and Applications

Our Infrastructure Services

Novi Infrastructure experts can help you upgrade your existing infrastructure so your business can take advantage of modern agile technologies. Our solutions deliver the performance, security and reliability that your business demands.

Servers, Storage and Virtualisation

Our experts can help design, build, and implement the appropriate physical or virtual server and storage solutions most suited to your business. Virtualisation can increase IT agility, flexibility, and scalability while creating significant cost savings. Sometimes a Hybrid Infrastructure involving a combination of technologies such as on premise infrastructure, externally hosted infrastructure and cloud based software services is the best solution.

Mobility Solutions

Novi design, implement and manage mobility solutions for your business. Access to on premise or cloud based business applications and file sharing is simplified. Our experts can deploy the technology to help you monitor and manage your end user mobile devices so you are in control of your business data. We can also advise on BYOD policies and controls that help ensure your business data is protected inside and outside your organisation.

Network Infrastructure

We can help you implement both wired and wireless infrastructure that integrate with firewall policies, accesses control and threat management and ensures security policies are maintained across your infrastructure. Our infrastructure experts will evaluate your traffic requirements on both wired and wireless networks, incorporating agility, performance and reliability into the design.

Remote Access and VPN

Novi experts can help you implement a secure site to site VPN solution that enables always on connectivity to remote offices and cloud services such as Microsoft Azure. Implementing security policies, user reporting, access control and threat monitoring all ensure that access is restricted to specified resources, and that the management team control who has access to network resources.

Disaster Recovery

Disaster recovery solutions and services keep critical business systems and applications running in the event of catastrophic failure. By working with leading technology vendors our experts have commissioned a range of Disaster Recovery infrastructure solutions and cloud based Disaster Recovery services which can be customised to suit each customer.

Infrastructure Health Check

Even the best-run networks and data centres require regular checks to ensure optimum performance and maximum business productivity. Novi Infrastructure Health Checks provide an objective evaluation of your IT infrastructure. Our experts will analyse and monitor your IT infrastructure with a view to identifying and reporting performance bottlenecks that could be impacting business productivity.
