

NOVI

Technology for Business

Scalable and Efficient Cloud Solutions

Our Cloud Services

Novi offer a range of cloud services and cloud infrastructure solutions. Cloud options range from entry systems through to highly available cloud infrastructure capable of supporting critical business applications depending on your needs.

Hybrid Cloud

Novi's Hybrid Cloud solutions can consist of local cloud infrastructure on your premises which can also be integrated with external cloud services such as Microsoft Office 365 or Azure. This solution will appeal to businesses that wish to retain some aspects of their local IT capability for better control over application performance and data security, but also want to benefit from cost effective and flexible software-as-a-service cloud services when it makes sense to do so.

Private Cloud

A private cloud solution is a highly scalable virtualised environment where all components are dedicated to you, delivering optimum security, performance and customisation within a private network. Novi Private Cloud solutions are built using the latest Enterprise-class technologies. It is designed to work with your application needs delivering reliable, high performance computing resources for mixed application workloads.

Office 365 Cloud

Microsoft Office 365 is a suite of essential cloud services and applications that increase productivity, communication and collaboration across your organisation. Novi has partnered with Microsoft to deliver Microsoft Office 365's cloud based services to our customers. Our experts help you migrate your existing information to Office 365 and then manage the service on your behalf.

Cloud Based Services

Cloud based services enable your business to easily implement enterprise grade applications and Infrastructure as a Service (IAAS) without upfront capital costs. Our suite of cloud based services securely backup your files and server application data. We also provide cloud based security services that protect company email and provide comprehensive monitoring and reporting of Internet traffic.

Email Protection Service

Phishing emails are one of the main tools used by attackers to compromise systems and gain a foothold inside your business. Novi Email Protection provides essential filtering and blocking of unwanted email and malicious attachments before they reach your organisation. The cloud based service helps protect your organisation from 99% of spam, phishing attacks and malicious email viruses without any hardware or software investment.

Web Monitoring Service

Novi Web Monitor is a cloud based reporting service which helps you understand employee internet activity, bandwidth usage and helps identify potentially compromised devices inside and outside your organisation. By identifying usage trends and potential threats, firewall policies can be adjusted to help keep your organisation protected, data secure and employees productive.
